INCIT: How Digital Transformation in Manufacturing is Enabling Shopfloor Intelligence for Improved Operations

Only a fraction of manufacturers embrace digital transformation, missing out on the benefits of shopfloor intelligence for improved quality management and operational efficiency. See how a connected shop floor is revolutionizing operations with insights from the International Centre for Industrial Transformation (INCIT).

Abandon Your Frankenstein Approach to Quality Inspections

We understand the pitfalls of relying on disjointed systems like Excel for quality inspections and how it impacts product quality and costs. Kinetech's COO, Ricky Volz in his newest blog highlights the option to ditch your Frankenstein approach to QA/QC and build a custom, mobile-friendly quality inspection solution, ensuring seamless processes and elevated product quality across your organization.

The Digital Factory: Visualize Production Planning

For this Manufacturer, it is not just about scheduling—it is about catalyzing organizational change through innovation. If you are limited by the features of your ERP's production planning system, then look to Kinetech to connect and then extend those capabilities to provide your organization a more dynamic, mobile, and visually engaging set of capabilities.

Picture This: Real-time Data Visualization

Having real-time data visualization on your shop floor is like having a live feed of what's happening in your production line. It helps you make quick decisions, spot issues as they arise, and keep things running smoothly. We have seen directly applied and for manufacturers, differentiation is all about staying agile, optimizing schedules, and keeping customers happy.

Mendix Inspection App Extended to Include Offline Mobile

Building on Mendix's foundation, Kinetech has now integrated offline mobile capabilities to the Inspection App, enabling users to seamlessly conduct quality audits and inspections even without an internet connection. This expansion of capabilities exemplifies the power of Kinetech and by extension, low-code technology, showcasing our commitment to innovation and meeting the evolving needs of our users. Stay tuned as we continue to enhance our solutions to better serve you.

Still operating your shop floor in the dark?

How a custom solution can improve your overall equipment effectiveness.

View this whitepaper to learn more about how Kinetech enabled our client to bridge the IT / OT gap and identify where productivity is lost in their existing processes. Through access to real-time data that tracks the KPIs defined by them, our manufacturer is able to identify the drivers for performance and improve the overall equipment and operator effectiveness.
